NOZZLE SIZE SELECTION CHART

Determine the nozzle size by the pressure washer's GPM @ PSI (gallons per minute @ specific pounds per square inch). If the nozzle size is too small, your equipment can be damaged. If the nozzle is too large, cleaning ability is compromised. Nozzle fan degree does not effect nozzle size selection.

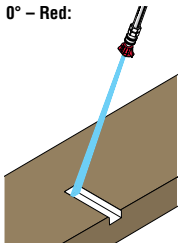
Nozzle fan selection

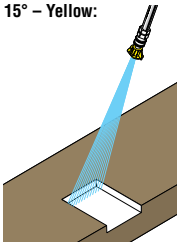
Select the nozzle degree or spray angle, based on your application. Standard nozzle degrees - 0^0, 15^0, 25^0 and 40^0. Using the wrong nozzled degree can damage the surface you are cleaning.

0° – Red:



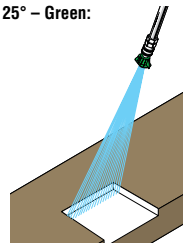
Cutting nozzle. It delivers a concentrated stream that can gouge or cut. It can cut stubborn stains from concrete and other hard surfaces.

15° – Yellow:



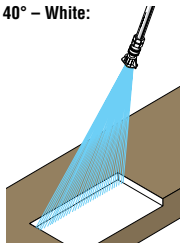
Chiseling nozzle. Working at a 45° angle, this nozzle works like a scraper, stripping paint, grease and grime from hard surfaces.

25° – Green:



Flushing nozzle. The most commonly used nozzle for cleaning dirt from siding, sidewalks and metal furniture as well as for wet sweeping leaves.

40° – White:



Wash nozzle. Its wide spray allows you to wash and rinse a large area fast. It is usually safe with most surfaces, including aluminum siding, windows and vehicles.
